 - Google Collab

CERTIFICATES

- Diploma in Full-Stack Developer
- Codeathon
- KIOT
- Hackathon
- SRM
- Project Expo
- KPRIET
- ChatBot creation
- Cybernaut

OBJECTIVE

EnthusiasticB.Tech Artificial Intelligence & Data Science student with hands-on experience in face recognition, emotion sensing, and machine learning projects, along with proficiency in using various AI tools and frameworks. A full-stack developer skilled in React.js, experienced in developing and deploying real-world web applications. Also an emerging UI/UX designer, driven to integrate AI, web technologies, and design to build impactful, user-centric solutions.

WORK EXPERIENCE

Data Analytics Intern
ALBNSecuritiesPrivateLimited | Dec2025

- Completed a Data Analytics internship with hands-on experience in Excel and Power BI, contributing to data preparation, visualization, and business insights.

Artificial Intelligence Intern
LitzTech | Jun2025-Jul2025

- Completed an Artificial Intelligence internship with hands-on experience in AI concepts, AI Tools,real-world applications, and problem-solving.

Full Stack Developer Trainee (HDFD)
CSCComputerSoftwareCollege | Aug2023-Aug2024

- Completed a one-year Honours Diploma in Full Stack Development with hands-on experience in frontend, backend, databases, and Python-based projects.

PROJECTS

Python Weather Forecasting System

- Developed a weather forecasting application using Python to analyze and predict weather conditions based on historical data.
- Performed data processing and visualized weather trends using the Matplotlib library, presenting forecasts through clear and informative graphs.

AI Music Generator

- Built a fully Python-based AI music generation system that uses machine learning to detect facial emotions and play suitable music automatically.
- Implemented face emotion recognition models to analyze user expressions and classify emotions in real time.

Smart Certificate Generator

- Developed a live automated certificate generation system with roll number and OTP-based authentication, enabling students to securely download customized certificates and significantly reducing manual effort.

AI Automated Fridge Toolkit Using Machine Learning & IoT

- Created a smart fridge system integrating Machine Learning and IoT for automated monitoring and management.
- Enabled intelligent decision-making for inventory tracking and efficient resource usage.
